Abstract: The paper proposes a re-examination of the hitherto supposed Latin ancestry of Rum. \textit{pāti}, Arum. \textit{pat}, Alb. \textit{pësoj}, Bulg. \textit{Bα}, Mac. \textit{namu}, S.-Cr. \textit{nam}\textit{umu} are almost unanimously interpreted as loan-words from a reconstructed Vulgar Latin \textit{\text{*}}\textit{patire} \textit{< Lat. patior} “to suffer, endure”\textsuperscript{2}. But one Balkan language, Greek, stands aside, in the specific position of having a verb of its own, \textit{πάσχω} i.e. \textit{παθαίνω} “to experience (bad or good), endure, suffer, be ill, etc.”, continually present from antiquity into this day, only undergoing some changes of the original semantic span and certain shifts in the hierarchy of its meanings (for details cf. Liddell/Scott, Sophocles, \textit{ΛΚΝΕ}, Frisk s.vv.). Although almost synonymous and partly even homophonous\textsuperscript{6}, Lat. \textit{patior} and Gk. \textit{πάσχω} are not cognate\textsuperscript{7}, so this...
absence of their etymological identity lies at the root of the problems we face in interpreting their presumed continuants in the Balkans.

1.1. It is our assumption that, at least in the major part of the Balkans, the donor language for the verbs in *pat-* "to suffer, etc." was not Latin, but Greek. Putting aside the peculiarities of phonetics (which are discussed within paragraphs dealing with each of the languages in question), general observations can be made about semantics, word geography and, to a lesser extent—dictated by the scarcity of historical dictionaries of the Balkan languages—about the chronology of loaning. Being mindful of what *patior* and *πάσχω* meant originally⁸, we should be aware of the semantic development each of them has undergone meanwhile. Some stages of those evolutions, especially those taking place in the Balkans and in the Middle Ages, must necessarily be reconstructed by speculation.

1.2. Although *πάσχω* basically meant "to have something done to someone; have something happen to one; feel, be affected, be in a certain state of mind", grammarwise "be subject to changes; be passive" (altogether, it is "to experience" in the widest sense of the word, primarily neutrally, with adverbial specifications also good or bad, eventually shifting toward an implicitly negative⁹ sense, so that the idea of suffering became very distinct, e.g. "suffer punishment, pay the penalty" as early as the 4th c. B.C.), its very prominent meaning "to be ill (with specification of a part of the body or an illness)" attested since 3rd-4th cc. A.D., was apparently conditioned by Latin semantics¹⁰, while its very close nuance "to be damaged, handicapped"¹¹ occurs much later, in the (late?) Middle Ages¹².

1.3. On the other hand, Lat. *patior* "to bear, support, endure (pain, damage, evil, injustice, poverty, slavery, exile, etc.)", "to suffer, meet with, be afflicted by (punishment, shame, shipwreck, disaster)", (poet.) "to suffer, pass a life of suffering or privation" actually had a narrower semantic range, but it underwent certain Greek influences very early, especially in some terminologies (thus both came to denote "passive", as opposed to "active", *pati* vs. *facere*, like *πάσχειν*, vs. *δραν*, cf. Ernout/Meillet 864-865, Frisk II 478-479).

1.4. It was not before Christianity that Gk. *πάθος* "incident, accident; experience (good or bad)" later "suffering" too, acquired its synonymous counterpart in Lat.

---

⁷ For the genetic diversity of the two verbs (each of them lacking quite certain and clear IE bonds), cf. Frisk II 478-479, Ernout/Meillet 864-865, Pokorny 641, 792-793.
⁸ It would take a serious study to trace the influences these two verbs exerted on each other already in antiquity, before evolving into Vulgar Latin or Balkan Romance and Medieval (later Modern) Greek respectively. For the time being we rely on Liddell/Scott, Lewis/Short and standard etymological dictionaries (cf. note 7, also 9 and 11).
⁹ So we read in Bauer s.v. *πάσχω* that in the New Testament it rarely comes in a positive sense, and never so without a closer re-inforcing determination. It occurs as positive only in Gal 3, 4, as neutral in Mt 17,15 (as *κακω* *πάσχων*, while elsewhere, and always in the Septuagint, it means "to suffer, starve" (with or without a determination, cf. *πάσχων σαρκί* 1 Pt. 4 1a.b.; *πάσχειν* γονέως 1 Pt 4, 15 "to be punished for manslaughter").
¹⁰ Stemming from the essence of the IE root *pē*- / *pō-"to put away, damage" which *patior* is deduced from (cf. Pokorny 792).
¹¹ Its first record in Italian as "to be ruined, damaged, scattered" dates from 1550 (cf. DELI 892; for its absence from Venetian, cf. Boerio 482), while in modern Italian it comes only in transitive use, with *danno* as one of the objects the verb *patire* requires (also *patire la fame, ~ di sete, ~ scarezza di..., ~ un manco, ~ di mal di capo, etc.
¹² It is absent from both Bauer (cf. note 9) and Sophocles (cf. s.vv.), but it ranks high in the Modern Greek semantic hierarchy, cf. ΛΚΝΕ.
passio, as a word reserved for designating the Passion of Christ\textsuperscript{13} – conspicuously absent from the Balkan languages today (the same is true of its Greek equivalent, save for Modern Greek) which is unlikely to be accidental.\textsuperscript{14} That speaks for the profane origin and ways of arrival of the prototype(s) of the verbs in *\textit{pat}- in the Balkans.

1.5. On the other hand, another Greek deverbative, \textit{πάθημα} "that which befalls one, suffering, misfortune", "affection, feeling"; pl. "incidents or changes of material bodies", etc. does appear in the majority of Balkan languages, Arumanian, Macedonian, Bulgarian, Rumanian (perhaps also in Albanian, cf. § 4.1., but certainly not in Serbo-Croatian), as a word for "suffering, misfortune". However, it does not refer to Christ's Passion\textsuperscript{15}, but to ordinary, everyday human suffering. That would explain why in most dictionaries the respective continuants of \textit{πάθημα} are marked as obsolete, popular, regional or dialectal (cf. e.g. BER, DLR, Tiktin, etc. as well as Rusek's insisting on the colloquial character of both the verb and the noun in Bulgarian).

2.0. In modern Rumanian there are two practically synonymous verbs, a primary one \textit{păţi} tr. "(er)leiden, erdulden, ausstehen, erfahren" (first recorded in 1470 A.D.) interpreted as deriving from Lat. \textit{pattior} (Tiktin III 45, Cioranescu 609-610, also REW 6294) and a denominal \textit{pătimi} tr. pop. "(er)leiden, erfahren", intr. "leiden" (since 1581) which derives from \textit{patimă} f. "Leiden, Leidenschaft" (since 1602), recognized as a Greek loan-word, from \textit{πάθημα} "id." (Tiktin III 21, Cioranescu 610\textsuperscript{16}, also REW 6291).

2.1. The situation with the Grecism being clear, we are actually re-examining only the primary verb, formally and semantically. To the best of our knowledge, the two themes have not been contrasted in terms of questioning the phonetic difference between them: the palatalized voiceless dental vs. the nonpalatalized one, which appears to be the only formal problem we are facing. The clue is certainly in the chronology of Rumanian palatalization, the details of which we cannot go into now.

2.2. For our purpose it matters that both verbs are today marked as obsolete and dialectal and/or provincial in scope, yet with a considerable number of derivatives (which seems to bear witness to their wider distribution and higher frequency in the past): \textit{păţanie} / \textit{păţenie} f. fam. "(schlimmes) Erlebnis, Abenteuer" (since 1868), \textit{păţeala} f. pop. "id." (since 1868), \textit{păţâu} n. "id." including the postverbal \textit{păţ} "id", \textit{păţit} "der die (betreffende) Erfahrung gemacht hat, der vieles durchgemacht hat, mit allen Hunden gesatzt ist, erfahren"; and from \textit{pătimă}, besides \textit{pătimi}, \textit{mesc}, also \textit{compătimi}, \textit{impătimi}, \textit{pătimire} f., \textit{pătimas} adj. (1660), \textit{pătimor} adj. (1679) (cf. Tiktin III 42, in greater detail DLR s.vv.).

2.3. The primary verb is not only earlier attested than the denominal, but also more present in literature. The contexts it appears in are almost regularly secular\textsuperscript{17},

\textsuperscript{13} Cf. "rare et tardif passio..." etc. (Ernout/Meillet l.c.).
\textsuperscript{14} We shall return to this fact later again, in arguing against Skok's assertion that the verb has entered Serbo-Croatian through Christian mediation, cf. § 5.2.3.1., note 48.
\textsuperscript{15} For designations by native terms, cf. S.-Cr. \textit{муке Исусове страдање}, Mac. \textit{маки Исусови страдания}, Bulg. \textit{страсности}, Csl. \textit{страсть} related to verbs \textit{мучити} (se) < *\textit{mучитi (съ)}, \textit{страшати} < *\textit{stradati} which are stylistically neutral synonyms of \textit{пăтити}, \textit{патi}, \textit{пaтi}. Even in Modern Greek there is \textit{τα παθή του Χριστού (unlike Middle Greek which had παθήματα for "Passion", cf. Sophocles 829-830); cf. also Rum. \textit{a păți a pătanie} "extreme suffering", etc.
\textsuperscript{16} He also cites Pascu's judgement that derivation from Greek is impossible on the grounds of phonetics – without an elaboration of that stand or a comment of his own.
\textsuperscript{17} A rare example from the 1688 Bible refers to suffering in general: "He started to learn that man's son was to suffer greatly" (DLR s.v.).
and –in case of transitive use– abundant in its variety of objects. It is also noteworthy that when used intransitively, the verb means "to suffer in general (incl. amorous pains)"), but dominant is semantics such as "to experience, go through, happen, have something happen (to someone or somewhere), etc.". Those events are usually unpleasant or bad, yet the object reinforcements that accompany the verb seem to testify to its originally neutral semantics – which is typical of the Greek verb and, at the same time, unknown to the Latin one (in both cases constantly, from antiquity into this day, i.e. Modern Greek and Italian).

2.4. Furthermore, Rumanian also shows a conspicuous absence of not only the typically Latin semantics of "damage, privation" –present not only in medieval and modern Italian (cf. DELI 892), but also in Modern Greek (and Albanian!)– but also of the outstanding Greek notion "ill, physically handicapped". These semantic features are of no avail in tracing the origin or discovering new itineraries of the verb păţi in Rumanian, therefore we must go back to its traditional interpretation as an indigenous verb, a contingent of VLat. *patire. However, we ought to amend this by saying that păţi, although formally developed in conformity with the rules of Rumanian phonetics, later underwent a strong influence of Greek semantics – much as in the case supposed for Arumanian (cf. § 3.0.), yet harder to explain in view of the geographic reality.

2.5. On the other hand, an ultimate Greek etymology seems equally possible. Since Rumanian does not discriminate between aspirated and nonaspirated dentals, theoretically Gk. παθαίνω i.e. ἐπάθον could also have yielded, with a loss of Gk. aspiration, Rum. păţi. That would bring about the problem of conjugation, but it could also be bypassed with a conjecture that it was effected through immediate borrowing from a Slavic source, e.g. Bulg. nàma (dialect also námum) i.e. Old Bulgarian namu(mu) (cf. § 5.1.2.), or Old Serbian namumu (cf. § 5.2.3.), which is formally a possible prototype, no less than VLat. patire.

2.6. And finally, a comment should be made on linguistic geography: except for a folklore formula a păţi ruşine "to suffer shame" which is located in Transylvania, all the other indications of dialectal background of the noun pathimă (or some of its variations) refer to Muntenia, sometimes to SW Muntenia (cf. DLR s.vv.). This proves nothing, but it does support the idea that at least the noun pathimă could be an immediate Slavic loan in Rumanian. So, if that road of loaning was open for one Greek word, what would keep it closed for the others?

3.0. Our evidence on Arumanian is exceedingly scarce, with regard to both synchronic and diachronic insights into its lexicon, so we can only note for this language too, the simultaneous presence of the verb pat impf. "patir, souffrir, endure; arrive, devenir" as well as the noun pathimă f., pl. pathimate "aventure, accident". The former has been interpreted as deriving from VLat. patire and the latter from Gk. πάθημα (Papahagi 820, 822; N.B. that the noun even conveys Gk. plural). In addition

---

18 Such as pain, trouble, malice, thirst, drought, defeat, shame, etc. Notable, as early as the 17th century, is the very frequent use of the syntagm păţi (multa) nevoie "to suffer (much) trouble" – the significance of the presence of a Slavic noun is hard to pass judgement about.

19 Perhaps itself of Latin provenance, cf. § 1.2., which is of no consequence for the case of Rumanian.

20 Although contemporary Bulgarian semantics does not feature meanings like "to happen, experience (in a neutral or positive sense)", there are traces of its earlier presence, e.g. in obsolete năşam (cf. OBulg. ктo добрo твори добрo да пати аесме зло твори зло да пати, v. Rusek 1983:38 and its presently archaic proverb добрo добрo не пача, зло зло не хваща in Gerov; cf. also RRODD s.vv.).
to the definition of the verb, this standard Arumanian dictionary\textsuperscript{21} gives a number of illustrations with a wider context – predominant among them are examples with the meaning "to happen"\textsuperscript{22}, distinct as exclusively Greek (in terms that it is unknown to Latin). Coupled with the geographic factor of a direct contact with Greek, which has resulted in Greek being the most represented stock of foreign lexicon in Arumanian, a Greek etymology for Arum. verb \textit{pat} could have been proposed, only if it were not for the phonetic obstacle standing in its way: the verbal theme in -\textit{t}- differs from the nominal one in -\textit{th}- which conveys the Greek distinction between dentals\textsuperscript{23}.

3.1. Therefore, it seems most reasonable to presume for this verb the original Latin prototype and a later interference of Greek semantics, the form remaining the same, i.e. preserving the regular reflex of Latin phonetics. If we are to add any new ideas, we should suggest investigating the possibility, already mentioned above for Rumanian, that the verb and the noun do not belong to the same chronological layer of loan-words. That would account for the difference in phonetics, and at the same time allow respective Greek sources to be supposed for both \textit{pat} and \textit{pathimâ}, which is suggested by all other factors except for synchronic phonetics. For the time being, we can make no further conclusions.

4.0. Judging from etymological dictionaries, the situation in Albanian partly resembles that in Arumanian and Rumanian: the verb \textit{pësoj} intr./tr. "to suffer damage, be ruined; to experience; to feel" is traditionally derived from Rom. *\textit{patiâre} < Lat. \textit{patior} (Meyer 335, Orel 323-324)\textsuperscript{24}. This is formally legitimate\textsuperscript{25}, except that most of its semantics –namely meanings "to experience", "to feel"-- can only be of Greek provenance, while the meanings of damage and ruin, although present in Modern Greek, might as well indicate Romance/Latin i.e. Italian semantics (cf. § 1.2., note 11). So we could either suppose the original Latinism in Albanian to have adopted the semantics of the Greek homophone verb (for phonetic concerns, see below; for potentially analogous developments in Rumanian and Arumanian cf. § 2.4., 3.0.), or propose a thorough examination to be made, by specialists in the history of Albanian, in order to investigate more factors, linguistic and non-linguistic, which perhaps could allow establishing a Greek etymology for this Alb. verb. The latter is especially likely to be true if evidence can be provided that it is similar to the case of its cognate \textit{pësim} f. "suffering, martyrdom". This verbal noun, a nomen acti ending in a frequent suffix (?)-\textit{im(i)}, is not discussed in Meyer or Orel lcc., probably under the assumption that it is just a normal indigenous formation, like many others (domestic as well as borrowed, cf. \textit{vrapim}, \textit{imtësim}, \textit{mëndhim}, \textit{mërgrim}, \textit{punim}, etc.). However,

\textsuperscript{21} Unfortunately, the new one by Matilda Caragiu Marioțeanu, \textit{Dicționar aromân (macedo-vlah)}, București 1997, of which we have only the first volume, comprising letters A to D.

\textsuperscript{22} Besides e.g. "While stallions fight, donkeys suffer", or "He suffers from epilepsy", there are such as: "Poor boys, what has happened to them", "Where could he be – what has happened to him", "What bothers him = what has happened to him", etc.

\textsuperscript{23} Such is the case of Arum. \textit{patumâ} "etage" < Gk. πάτωμα vs. Arum. \textit{path} / \textit{pathus} "affection" < Gk. πάθος, cf. Papahagi s.vv.

\textsuperscript{24} This interpretation has already been refuted – not elaborately, but just by including \textit{pësoj} in the number of erroneously proclaimed Latinisms in Albanian, cf. Sytov 1987:184.

\textsuperscript{25} Alb. -\textit{s}- can reflect both -\textit{t}- and -\textit{th}- which could have entered a process of morphological jodization (*\textit{pat-jo} or *\textit{path-jo}, as in other unquestionable dental ending themes: *\textit{mas}, aor. of *\textit{mat} "to measure" < *\textit{matja}, or buzë "lip, border" < *\textit{budja} (Orel p. XX), therefore no conclusions about the nature of the original dental can be made judging from the present phonetic form. However, isn't it possible, that Alb. -\textit{s}- in \textit{pësim}, \textit{mësim} reflects directly Middle Greek -\textit{o}- /\textit{h}/? In deriving Alb. forms from Greek, the point of departure should have been Gen./Dat. Sg. and/or Pl., with the stress on "eta": μαθηματός, μαθήματα, etc.
the origin of that suffix, i.e. its IE relations not being clear (cf. Dini 2002:183), we cannot completely reject the possibility of its Greek source, especially if we are mindful of the fact that, unlike in other verbal nouns mentioned above, the semantics of pësim does not completely reflect that of the verb pësoj. Studying this noun would be additionally interesting in the light of its pair mësim m. "lesson, lecture, training, education, science", fig. "advice, objection, moral, etc."26, a derivative (also uncommented in etymological dictionaries) of the verb mësoj "to learn, find out; teach, train; persuade, suggest", typically interpreted as stemming from Rom. *invitiare (Meyer 276, Orel 263-264)27, although Vasmer derived it from Gk. μαθανω, aor. μαθανον, the paradigm of which strikingly coincides with that of παθαίνω, aor. παθάνον; Çabej interprets it as a prefixal derivative of pësoj (for both cf. Orel l.c.). This multiplicity of solutions makes the whole story more interesting, yet definite conclusions harder to reach.28

4.1. Since we are unable to trace the source of Albanian pathim (as the alleged continuant of Gk. πάθημα mentioned in BER 5:94), as long as no further evidence on it is obtained, this record should not be taken into consideration.

5.0. Although the conventionally named "Balkan verb in *pat-" is present in all Balkan Slavic languages (but not all South Slavic ones, cf. § 5.3.), its picture varies considerably from one language to another. With regard to the presence of this verb the whole Balkan Slavic territory could be divided into two entities – for this purpose we shall define them as South-eastern and North-western.

5.1. As Slavic South-eastern languages we understand Old Slavonic, Bulgarian and Macedonian.

5.1.1. Judging from the Old Slavonic dictionaries, modern and old alike, the verb namutim "to suffer, endure" is absent from that language (it is missing from the Prague dictionary29 and Miklosich's mention of it actually relies on Old Serbian 16th-17th century documents and just one Valacho-Bulgarian)30. No forms other than the verb proper have hitherto been found.

5.1.2. The oldest Bulgarian attestations of патя appear as патити in the "Bitola triod"31, dating from the second half of the 12th century32, and are shortly

---

26 They are paired in the phrase pësimet bëhen mësime "no pains, no gains", lit. "sufferings make lessons", potentially reflecting Gk. πάθημα and μάθημα, the couple persisting from antiquity (τα δε μοι παθήματα μαθήματα γέγονε cf. Liddell/Scott s.v. παθαίνει) into this day as a lapidary τό πάθημα μάθημα (cf. also a similar phrase in Serbian: без муке нема науче [no pains no gains, lit. no pains, no lesson] as well as то је мени моја пата дала [my suffering gave me that], cf also § 5.2.7., end of note 63.

27 It is not insignificant that REW 4536 does not include any Albanian continuants of *invitiare.

28 As for problems of establishing rules of phonetic reconstruction – specifically in the case of Latin prototypes (and by analogy any other too) cf. Rusakov 1987:128: "... in determining the origin of one or the other Alb. word many authors depart from specific prejudices: either about their Latin origins (in the first place Meyer) or, on the contrary, Proto Albanian (Jokl, Çabej). However, because of the late literary fixation of Albanian, that question must, in many a case, remain open. ... Due to processes of intensive phonetic reduction, many Alb. words have raving and qualitatively possible Lat. etymologies."

30 His three sources in Lexicon palaeoslovenico-graeo-latinum (Vindobonae 1862-1865, 558 p.) are those bringing Old Serbian 16th-17th century texts, and one Bulgarian, published by Venelin (the one which Rusek 1983:38 mistakes as the single source of that lemma), so there are no grounds for considering the verb Old Slavonic.

31 Not in the main body of the text, but in an addition to it, which justifies the conjecture that it was a part of colloquial language (expressed by Rusek 1983:38), as is indicated by the secular context it appears in: пишем а не ти си патих от мрза всек; also по много си како написах нашТо П
followed by a 1230 A.D. record in yet another secular document\textsuperscript{33} – which is altogether very significant, not only for Bulgarian (since it shifts the previously existing chronology based on 15th-century Bulgarian documents, cf. BER 5:101), but also for other languages in the region, primarily Slavic ones. The quotes from the "Bitola triod", predominantly in secular contexts (cf. note 31), can serve as a solid, reliable testimony relevant for tracing the continuity of the verb later and elsewhere. In Bulgarian proper, \textit{пàмà} has been preserved, in the course of more than eight centuries, in colloquial and dialectal use, thus distinguished from its stylistically neutral synonym \textit{острадаам} (for the latter observation, cf. Rusek 1983:39). Its lexical-semantic family comprises dozens of words, not only prefixed and infixed verbs such as: \textit{изпàмà}, \textit{изпàщам}, \textit{испàтouvam}, \textit{нàпàтà се}, \textit{нàпàщам се}, \textit{нàпàщав се}, \textit{нàпàщувам се}, \textit{опàтевам, óнàпà, опàтòсувам (сi)}, \textit{опàтòсам (сi)}, \textit{пòпàтà, пропàтà, препàтòвам, препàтòм, пàщам}, but also variously suffixed deverbal nouns (mostly nomina acti and nomina agentis, meaning "suffering, anguish, misery" and "sufferer"): \textit{пàтîмî, пàтёнè, пàтéшì, пàтîлîо, пàтîнà, пàтîло, пàтîмо, пàтосîя, пàтîя, пàтîмîцà; пàтîлецî, пàтîлîн, пàтîлîац, пàтîнîк, пàтîлîя, пàтîлîнîк, опàтîйà, згопàтîйà}, etc. (cf. BER 5:101 for details on gender, semantics and geography). It is noteworthy that the authorities do not agree as to the ultimate source of borrowing into Bulgarian: Miklosich 233 derives the Bulgarian verb (along with the respective Serbian one) from Ital. \textit{patire} "to suffer, endure", Mladenov 415 departs from VLat. \textit{patire} "id." but he also mentions Gk. \textit{παθòνω}, while Filipova-Bajrova 139 has no doubts about its Greek origin. The most recent Bulgarian dictionary (BER 5:101-102) is undecided on this matter: it just reviews the existing interpretations – starting with "From Balk. Lat. \textit{pàtior, patire}..." and closing with

"Compare from the same origin \textit{пàтîмîа, пàтологòя, пàтос}" which would imply siding with the Greek etymology. A separate lemma houses the noun \textit{пàтîмîа} "suffering, misery", an indisputable Grecism (widely present in all Balkan languages – cf. BER 5:94, for comments cf. § 1.5. and § 4.1.).

This interpretation perpetuates an unnecessary dichotomy of the latter noun being of Greek provenance and the verb \textit{пàмà} (along with its broad family) deriving from an unfathomable Balkan Romance source, although there are no phonetic, morphological, semantic or geographic obstacles to tracing it directly to a Gk. prototype.\textsuperscript{34} The single occurrence of an \textit{-s-} theme in Old Bulgarian \textit{пàтисачà} (cf. note 31) is obviously incidental, but we believe it should be interpreted as reflecting the scribe's awareness of the Greek roots of the verb \textit{пàтîмî} (hence his tendency to normalize it in accordance with the usual form of Greek loan-words), perhaps coupled...
with his insufficient command of Greek, and definitely as an argument against the original Lat. provenance of the Bulg. пàмя (at least this one, but potentially some other verbs in the neighbouring Balkan languages it was further loaned to), into a logical historical frame, among other Grecisms pertaining to various domains of life (cf. Filipova-Bajrova 16-20, esp. 16-17) but often stylistically marked, dialectal or local in use. In a word, it is not easy, at least in the case of Bulgarian, to concur with the conclusion that "la presenza di derivati dal greco non può essere considerata come una prova contro la provenienza originaria del verbo dal latino balcanico" (Lekova 2003:63).

5.1.3. The Macedonian language has preserved the verb пати "to suffer (from hardship, illness, deprivation)" unto this day, both in dialects and in literary language. Along with the prefixed forms of the verb испати, напати (се), препати, пропати; and other locally developed derivatives with the semantics of nomina agentis and nomina acti: патник, патница, патнички, паталец, пателечка, патеник, патилка (whose origin from Gk. πάσχω i.e. παθάινω has never been questioned), there is also a direct loan-word from Greek, the abstract noun патима "suffering" < πάθη "id." (Argirovski 212, RMJ).

5.2. The Balkan Slavic North-West actually coincides with the territory of the Serbo-Croatian language.

5.2.0. Although Serbian (and even less Serbo-Croatian as a whole) does not fall in the number of first rank Balkan languages, it will be our focal point in examining the presumed continuants of Lat. patior in the Balkans. This is partly due to the position of this language – on the periphery of the central Balkan(ising) territory, yet cleft between the areas of irradiation of Latin and Greek, the rivalry of which constitutes the plot of the story we are trying to pursue in this paper. The other factor behind this choice is the fact that the most exhaustive material at our disposal comes from Serbian.

5.2.1. Relevant for Serbian are not phonetics or morphology (since пàмяту is formally deductible from both the Latin and Greek prototypes), but as elsewhere semantics and chronology (to the measure dictated by the uneven continuity of historical records), as well as the variety of derivatives composing the word-family of S.-Cr. пàмяту and finally the areal distribution of its attestations.

5.2.2. The semantic picture of пàмяту as reflected in Serbo-Croatian dictionaries, standard and dialectal, features various nuances of the meaning "to suffer": in general, from hardship of life, and then specifically, from emotional or spiritual pain, as well as from protracted illnesses, defects, shortages, etc. Its

---

35 This kind of distribution is not typical of the lexicon borrowed from Balkan Romance which, as a rule, used to cover gaps in the material culture of the Slavic settlers (including some features of the civilization new to them, such as OBulg. or OSerb. коледа "Christmas", комькати (се) "to give or take communion", коум(а) "godfather, -mother", олтарь "altar", etc. (cf. the inventory in Lekova 2003, also Popović 1960:592) but regularly showing an overall and not local distribution within the respective language.

36 We can consider, along with Argirovski l.c., that the 12th century "Bitola Triod" (cf. § 5.1.2. notes 31, 32) is a part of the Macedonian tradition too.

37 When it comes to dialects, we can never exclude the possibility of literary influence with certainty, yet when dialectal dictionaries' lemmata include illustrative quotes, it helps support our conclusions. However, there are instances, especially in smaller dialectal dictionaries, when the verb proper is missing, while some of its (unusual) derivatives are recorded – which often signals nothing but the collector's economizing with the extent of the dictionary or just the tradition of making dialectal dictionaries as differential, contrasting (in fact complementary) to Vuk's Српски рјечник.
semantics is also grammatically conditioned, since the verb can be both intransitive and transitive, active or reflexive, without or with an object (be it indirect or direct), often specified; if not an illness or a defect (expressed by nouns in the genitive or locative, e.g. suffer from headache; from evil eyes; in one's arm, leg, etc.) those "reserved" objects can be various shortages (of food, water, etc.), or evil, wrong, labour, effort. It is replaceable by its neutral synonyms *тревети* and *страдати*, occasionally also by *мучити(се)*, but those cannot always be substituted by *патити* which, unless used for illness or emotional pain, is in most other situations felt as slightly expressive.

5.2.3. As regards chronology, the earliest Old Serbian attestations of the verb *патити* "to suffer, endure, etc." date from late 14th and 15th centuries: (1) \( Да један његови не пати, а имена \) *Je иJe* криво; (2) \( Нек јеши плате и пате што би платили и патили речени сушењи (RJA) \)\(^39\). In these examples, the verb *патити* does not seem to mean either succeeding in general, or some indefinite and abstract suffering — nor is it concrete suffering from cold, hunger, etc. as in the earliest Slavic (Bulgarian/Macedonian) texts\(^40\). Here it functions as a part of a formula *да плати и пати и "to pay and bear the consequences/ be punished/ atone"(?)*, especially in the latter sentence, as it is in the following quotes from *Monumenta serbica*: (1) твърмо *кто* *Je* дългъшгь или чимь кривь, онь да плати и пати. (2) твърмо *тко* *Je* дългъшгь или чимь кривь, онь да плати и пати. (3) твърмо *кто* *Je* дългъшгь или чимь кривь, онь зад платак*Ja* и пати\(^41\). This formula appears to be a firm construction, representing a (legal) concept, the roots of which are not clear, while the two verbs employed to express it seem to be almost synonymous, with an obvious distinction between material compensation (*платити*) and corporal punishment (*патити*). Since historical lexicography cannot be helpful on this matter,\(^42\) it is hard to say whether they were coupled locally, or used for calquing (perhaps semicalquing?)\(^43\) a foreign prototype. Be that as it may, the fact remains that this

\(^{38}\) Cf. болест, бетес, труд, муха, зло – hence could be the composite verb *звапатити* се "to suffer badly" (for details cf. RJA s.v.), although it more likely reflects an identical Greek prototype (cf. § 5.2.4.1., note 53).

\(^{39}\) (1) [One should not suffer for the other]; (2) [If a man has behaved foolishly, let his body suffer, and his property is not guilty]. (3) [May the guarantees pay and suffer that which the mentioned prisoners would have paid and suffered] – (1) and (2) come from M. Pucić's Споменици српски ... с дубровачке архиве, and (3) from Jireček's Споменици српски, here quoted by RJA. Some of these examples (and those from MS later in this text) also in Daničić II 280.

\(^{40}\) It goes without saying that the oldest Slavic record of *патити* in the 12th century "Bitola triod" (cf. § 5.1.2. notes 31, 32), although not Old Serbian, should be taken into account in the study of Serbian *патити* since it comes from a territory that could have been transitional between Greek and Serbian. For some instances of Bulgarian mediation in Serbian borrowing from Greek, cf. Vasmor 1944:13.

\(^{41}\) This reads: (1) [if someone owes something, or is guilty of something, he should pay and suffer] < 1405 A.D. Stephanus, Serbiae despotes, confirmat privilegia Ragusii; (2) ["idem"] < 1405 A.D. Gregorius et Georgius Branković ... confirmat privilegia Ragusii; (3) ["idem", with slight orthographic differences between the three examples] < 1428 A.D., Georgius, Serbiae despotes, confirmat privilegia Ragusii concessa a prioribus Serbiae dominis, cf. MS 268, 271, 355.

\(^{42}\) Striking is the absence of Lat. *patior* from medieval Latin documents on the territory of present-day Serbo-Croatian (cf. *Lexicon Latinitatis Medii Aevi Iugoslaviae*, Zagreb 1978), so even the fact that Lat. *patior* comes with the object *poena* (cf. Lewis/Short s.v.) remains of no consequence in our case.

\(^{43}\) Records of a similar legal use of the Ancient Gk. *πασχω* "to suffer punishment, pay the penalty" (cf. Liddell/Scott s.v. *πασχω*) cannot be counted on as being loaned to Serbian 10-18 centuries later, yet they cannot be disregarded either. On the other hand, in the Venetian dialect of Italian (as recorded centuries later than the Branković charter), there is a trace of the concept of "one suffering for the
phrase was "fashionable" within a limited span of time, restricted to use by scribes at the Serbian court, and unrecorded ever after (as it had not been before).

5.2.3.1. From the 15th century on, this verb is in more or less continual use – by Dubrovnik writers and poets, and by various authors whose language was close to the popular speech (from M. Marulić or M. Divković, to a number of 19th century writers, cf. RJA s.v.), although not with a steady ubication. It was present further to the west, in the works of Croatian lexicographers Micaglia, Della Bella, Belostenc, Stulli and translated as "patior, suferro, tolero; esse re stare addolorato; pati, perferre", as well as in Српски рјечник by Vuk Karadžić who defines it as "leiden, patior"44. There are other examples from Serbian folk tradition, in proverbs and stories, also recorded by Vuk Karadžić: Нe зна чиаила шта пати глава, Све круа … би je и главу патиша45 which are testimonies to its presence in the Eastern, or at least central, parts of the broader Serbo-Croatian territory. The above-mentioned meanings are present in different sources, and almost regularly in secular contexts, related to everyday life – except for a few instances regarding spiritual life, but not in a strictly religious use: Спомени se ... да си роден да платиš, Ako je u čistilu, neka pati dokle god ne ispati што je zaslužio46 – this last example strongly resembles the OSerb. syntagm да плати и пати, only elevated from a profane to a spiritual level47. Our insisting on the scarcity of religious contexts (in Serbian, but elsewhere too) is actually an argument against Skok's assertion that the verb was borrowed, through Christian mediation, from Balkan Romance (Skok II 621)48.

5.2.4. We should be mindful of the fact that in the course of centuries the verb натмиту basically meaning "to suffer (difficulty in general, especially a hard life, but often referring to spiritual or emotional pain)" (cf. also § 5.2.2. for more meanings), has generated a fairly large lexical-semantic word family, consisting of prefixed verbal and derived nominal forms, nomina abstracta or nomina agentis, rarely adjectives and adverbs, such as: испатити, испатити, напатити (се), препатити, пропатити, злопатити (се); патња49, also пати "suffering"

44 Followed by an illustration with a proverb: Ко много зна, много и пати [who knows much, suffers much too]. This appears to be yet another echo of the couple пάθη vs. μάθης, in an inverted order, though.
45 [The turban does not know what the head is suffering], [Mother-in-law hated her ... so she would torture her with hunger] cf. RJA s.v.
46 [Remember ... that you are born to suffer], [If he is in purgatory, let him suffer until he expiates what he has deserved] the latter from M. Divković's Besjede, cf. RJA s.v.
47 This very example, neka pati dokle god ne ispati, also opens the way to re-examining the existent interpretations of the widespread verb ucspatitamо impf. "to expiate, repent and atone", hitherto considered an intensivum from испосатите < пост "fasting" (cf. Skok III 15), yet it deserves a separate study which should not disregard Bulг пънам "папа", cf. BER s.v. папа.
48 "Посуденика посередством кршканиства из балканског латинита" as he puts it, at the same time allowing that our word could also be cognate with the Latin one, i.e. sharing the same IE root *pē- / *pē- "weh tun, beschädigen" with it (Skok I.e.), which is not likely in view of the fact that the verb cannot even qualify for the status of a South Slavic dialectism (due to its absence from Slovenian, cf. § 5.3.), let alone it has any further Slavic relations. Such parallelsisms between Latin on one side, and an isolated (or even an accidental group of) genetically distant Slavic language(s) on the other, are quite improbable.
49 Although presently most frequent, this abstract noun was first recorded only in Vuk's Српски рјечник: Слепота je тешка мука, тешка патња [Blindness is a great trouble, great suffering], also later in S. M. Ljubiša: јер су мо додијале душевне патње, више не тјелесне болести [he was
(attested only in the RSA materials, cf. note 63), злопата\textsuperscript{50}, злопатно adv., злопатња, злопаћа, злопати, патење\textsuperscript{51}, патлук, патенсе, патени, злопатник, злопатнички (adj. + adv.), сапатник, паћеница, злопатница, сапатница, паћеник, паћениште, паћени, паћеница, паћопаћеница, etc. (cf. RSA and RJA s.vv.).

5.2.4.1. Deserving special comment is the compound verb злопатити (се) impf. "to suffer badly" (< злo "bad(ly)" + патити, incl. respective derivation). Although it appears to be an indigenous formation (cf. note 38), it is much more likely to be a direct translation (in fact semitranslation) of Gk. κακοπάθειο / κακοπαθείνω "to be in ill plight, be in distress" (also κακοπάθεια "distress, misery, strain, stress" and a number of other nominal derivations, dating from Ancient Greek unto this day). It is first attested in 16th century Dubrovnik poetry,\textsuperscript{52} while the earliest lexicographic record, злопаћенство "patimento, il patire" comes from Della Bella's dictionary (early 18th c.). However, they are all preceded by a literal translation of Gk. κακοπάθεια, the OSerb. злострадание "calamitas" from the Karlovački letopis (ca. 1503)\textsuperscript{53}, reflecting a likely earlier date of semantic translation of the Gk. prototype, since it occurs in an original historical text, and not in some translation from Greek. It is a curiosity that in Bulgarian, to the best of our knowledge, such compounds are not attested, save for a most westward dialectal record злопатиа "suffering" (Kjustendil, cf. BER 5:101). On the other hand, a translation or semitranslation from some Latin, i.e. Romance source is not an option since respective compound verbs are not attested for those languages.\textsuperscript{54}

5.2.4.2. At the same time, nomina agentis сапатник, сапатница are probably newer indigenous denominal formations stemming from патити etc. (after the model сапутник < путник "traveller", сараћник < радник "worker") since they are –so far at least– lacking verbal origin in a prefixed Serb. *sapatiti\textsuperscript{55}.

5.2.4.3. It is noteworthy that the abovementioned words are more or less intensively and evenly present, not only in literary Serbian and Serbo-Croatian but also in the dialects, Štokavian as well as Čakavian and Kajkavian.
5.2.5. The geographic distribution of the word family of namumu, frequency of its use, abundance and contents of phraseology, as well as semantics pertaining to one region or the other, does allow a certain demarcation to be made between, roughly speaking, eastern and western parts of the entire Serbo-Croatian territories. It is in the sources from Dalmatia and the Adriatic islands that namumu means "to suffer (hardship and/or shortage)"; in Montenegro it is more or less the same (with a noticeable dominance of nominal forms), while in Serbia, central and especially SE Serbia, general and abstract meanings are rare, felt as belonging to the literary language, and very frequent is the use of namumu for illnesses, defects and the like, which includes more colourful phraseology, ironical use, etc. The dozens of sources cannot be quoted here in detail nor mapped either, so we are leaving this task for some future occasion.

5.2.6. In a word, it is not impossible that the present-day situation actually reflects the results of various ways of borrowing different verbs from multiple sources: from Italian patire (which was already Miklosich's idea for Serb. and Bulg. verbs, resolutely rejected by Maretić in RJA s.v., but actually worth reconsidering) that could have influenced not only the Adriatic coast, but also a certain part of its hinterland (perhaps Montenegro too), while in the eastern regions we are dealing with continuants of a –more or less early– loanword from Gk. πάσχω. In fact, it might well be that Greek is the source of all the historically documented traces of this verb, in Old Serbian and in the Dubrovnik literature (perhaps even further to the west), which could qualify the verb namumu in Serbo-Croatian for joining the stock of the Byzantine Greek lexical heritage, conventionally referred to as "western Grecisms". Such an interpretation would make it easier to avoid the so far futile search for firm evidence of a Romance source (as Skoka suggested, v. note 48, cf. also Lekova 2003:60), not only for our verb, but in wider Balkan surroundings too. At the moment, Romance origin seems much less likely than it was considered before, at least for some Balkan languages, yet it can never be totally rejected.

5.2.7. And finally, in continuation of the previous idea of multiple sources of borrowing, we could make a bold hypothesis that there might also be an array of forms and meanings of the verb namumu that can be interpreted as native in origin since they are distinct by consistently appearing in transitive form, in a single meaning "to torture, put to torture" in a technical sense (partly synonymously with мучити, yet employed to deliberately break the possible figura etymologica мучити...
would be making with its productive noun муча), and on a clearly delineated territory. The RSA materials we have insight into have given rise to such an idea, but it would take a meticulous elaboration before anything could be concluded with certainty. We are aware that these examples might well be the result of analogy with мучити tr. "to torture" and мучити се intr. "to suffer", yet this specific semantics – which happens to be unparalleled by respective forms elsewhere in the Balkans—could lead us to the domestic *пяти (in ablaut with *пяти impf. "to ask, investigate, try, etc." which is continued, inter alia, in Russ. пытать impf. "to torture", пытка f. "a torment, torture", cf. Fasmer III 421), the accented PSl. semivowel yielding a S.-Cr. -a- in the root. But that calls for a Slavistic study (since that verbal theme is poorly attested in the Slavic South, and the meaning is restricted to Russian, even excluding its westward dialects) so for the time being this question must be put aside.

5.3. And last, but not least, against the theory of the Latin origin of Balkanic, at least Balkan Slavic verbs, there is an argument of linguistic geography, a negative find, the value of which is not to be ignored. To the best of our knowledge, Slovenian is the only South Slavic language this verb is unknown to and that is not irrelevant for our discussion. What distinguishes Slovenian from its other three Southern cognates, in the domain of lexical borrowing, is the fact that throughout history it fell into the sphere of influence of the Western Church, and consequently the Latin language (which includes all its varieties and heirs, even the dialects of Italian –in which the verb патire "to suffer, endure" is very present and quite productive– especially in the zones of direct contact between the two languages, from Istria to the Alps). Had the source of irradiaiton been Latin, i.e. its late vulgarized form or Balkan Romance successor, it would have been unlikely to avoid only Slovenian and spread throughout the Balkans, among the Slavic and non-Slavic languages alike, all of which (except for most of the western parts of Serbo-Croatian,
and to a limited extent Albanian too), on the other hand, are (or used to be, until the Ottoman invasion) in the domain of the Eastern Church – which implies a strong influence of the Greek language, varying from active bilingualism to various degrees of borrowing or calquing, be they lexical, phraseological, semantic or syntactic.

5.3.1. We should also bear in mind that although among the early borrowings from Balkan Romance into Slavic languages, there are several terms pertaining to religion in a wider sense (such as коум, олтарь, поганин, коледа, cf. § 5.1.2. esp. note 35), the verb in *pat- does not fall in that number\(^{66}\), since it was not borrowed through Christian mediation – this is especially true of the Balkan Slavic languages, Macedonian, Serbian, Bulgarian, since the christianisation of their speakers was performed in their native tongue(s) (i.e. Old Slavonic which later evolved into various redactions, further profiled into modern languages), although it took place under Greek patronship. Arumanian was exposed and remained open to Greek influence, while Rumanian, in spite of its Romance roots and foundations, was open to a strong Slavic influence, which eventually resulted in its adopting Greek lexicon via Slavic mediation.

6.0. The aim of this paper was not to reach any final conclusions, but to draw attention to the problem of various etymologies of Rum. пăţi, Arum. pat, Alb. пësoj, Bulg. нăма, Mac. namu, S.-Cr. нăмуму, to shed some new light onto the Serbian material, examine it, bearing in mind the meagre (and uneven) evidence from other Balkan languages. The aim was also to appeal for a detailed investigation of all sources at the disposal of local linguists, taking into consideration all the dialectological and facts of linguistic geography that can be obtained, thus making it possible to conduct an overall study of the problem which would, in contrasting the facts of each language with those from the others, finally reward every individual language with a clear picture about the etymology of its own verb in *pat- "to suffer, endure, etc."

\(^{66}\) Abstract or more sophisticated lexicon was "imported" only later, in conditions of bilingualism or at least intensive trading contacts (for terms such as luşrat, zamîrîtat, bandunjat, abait, etc. cf. Popović 1960:593).

Путеви патње на Балкану: испреплетаност *patior* и πάσχω

Резиме

У раду се даје преглед савремене ситуације у сваком језику тако што се констатује обим лексичко-семантичких породица одговарајућих глагола и разматрају се формални, семантички, хронолошки, лингво-географски и други нелингвистички фактори од потенцијалног значаја за утврђивање извора позајмљивања. Анализа је усмерена на српски језик (тј. српско-хрватски) који се –иако није типичан балкански језик– захваљујући релативном обилу располаживих података, показа као користан и за општа разматрања, будући да је у њему, по свему судећи, дошло до вишеструког позајмљивања античког пара глагола од њихових различитих наследника у различитим периодима.

У раду се не доносе коначни закључци, будући да је циљ био само да се скрене пажња на проблем различитих етимологија горепоменутих глагола у балканскам језицима и боље осветли српски материјал, не губећи ни у једном тренутку из вида његово балканско окружење. И најзад, у раду се позива на спровођење детаљних истраживања свих извора који су доступни локалним лингвистима, што би омогућило збирно сагледавање читавог проблема и затим, унакрсним поређењем чињеница сваког језика, довело до коначне слике о етимологији глагола на *pat*"трпети, страдати итд." у сваком балканском језику понаособ.
